Long Knife Jig SVM-140

LONG AND THIN KNIVES

E.g. filleting knives.
Min length of blade (a) 160 mm (6¼").

Positioning of Machine

Grinding direction:
Towards the edge.

Note The height of the bench must not be too high when grinding knives. 550–650 mm (22–26") is suitable depending on your height.

Design

The jig comprises an adjustable clamp (1) for holding knives of any thickness and an adjustable stop (2). You adjust the jig to the knife thickness with the screw (3). You lock the tool by tightening the knob (4).

The jig rests on the Universal Support. The exact edge angle is set by rotating the stop. The Universal Support is placed vertically for grinding towards the edge.

This jig is made especially for long and thin knives. It works in the same way as the SVM-45 jig but it is wider and therefore gives more support to long and thin blades.
